November 10, 2005**CLAIM AMENDMENT**

Please amend the claims as follows:

1. (Original) In combination:

a fluid receptacle having a coupling and an opening from an exterior of said fluid receptacle to an interior of said fluid receptacle, said opening permitting fluid to pass between said fluid receptacle interior and exterior;

5 a cover having a coupling co-operative with said fluid receptacle coupling, said cover preventing fluid from passing between said fluid receptacle interior and exterior when said cover coupling is coupled to said fluid receptacle coupling in a closing coupled relation and further removable entirely from said fluid receptacle coupling to open said receptacle opening; and

10 a special receptacle cap removably holding a first composition adjacent said fluid receptacle and separating said fluid receptacle coupling from said cover coupling, said special receptacle cap comprising:

a divider wall;

15 a first coupling affixed to said divider wall and co-operative with said fluid receptacle coupling, said divider wall cooperative with said fluid receptacle to prevent fluid from passing between said fluid receptacle interior and exterior when said special receptacle cap first coupling is coupled to said fluid receptacle coupling in a closing coupled relation, said first coupling further removable entirely from said fluid receptacle coupling to separate said divider wall from said fluid receptacle and thereby open said receptacle opening;

10/813,737
Page 3
November 10, 2005

20 a second coupling affixed to said divider wall engaging with said cover coupling in
a closing coupled relation to form an enclosed chamber isolated from said receptacle and at least
partially releasing to open said enclosed chamber.

2. (Original) The combination receptacle, cover and special receptacle cap of claim 1 wherein said special receptacle cap further comprises a first receptacle cap and a second receptacle cap, said first and second receptacle caps engaged to form a second cavity isolated from said first cavity and said receptacle.
3. (Original) The combination receptacle, cover and special receptacle cap of claim 1 wherein said fluid receptacle coupling further comprises a neck having said fluid receptacle opening passing therethrough.
4. (Original) The combination receptacle, cover and special receptacle cap of claim 3 wherein said fluid receptacle coupling further comprises external threads about said neck.
5. (Original) The combination receptacle, cover and special receptacle cap of claim 4 wherein said special receptacle cap first coupling further comprises external threads about a diameter corresponding to said neck.
6. (Original) The combination receptacle, cover and special receptacle cap of claim 3 wherein

10/813,737
Page 4

said cover comprises a cavity with an opening into said cavity.

7. (Original) The combination receptacle, cover and special receptacle cap of claim 6 wherein said cover coupling further comprises internal threads within said cavity.
8. (Original) The combination receptacle, cover and special receptacle cap of claim 6 wherein said special receptacle cap first coupling comprises a cavity with an opening into said cavity.
9. (Original) The combination receptacle, cover and special receptacle cap of claim 8 wherein said special receptacle cap first coupling further comprises internal threads within said cavity.
10. (Original) The combination receptacle, cover and special receptacle cap of claim 1 wherein said first composition is a solid edible composition.
11. (Original) The combination receptacle, cover and special receptacle cap of claim 10 wherein said first composition further comprises aspirin.
12. (Original) The combination receptacle, cover and special receptacle cap of claim 1 wherein said divider wall is generally planar, and second coupling is affixed to said divider wall on a surface of said divider wall opposite a surface where said first coupling is affixed.

13. (Currently amended) A combination bottle, cap, and sectional container, said bottle having:
a liquid impervious body with a height and horizontal cross-sectional area;
a neck having a horizontal cross-sectional area less than said horizontal cross-sectional area
of said liquid impervious body, said neck coupled to said body and having an
opening from a first open end to a second body end and opening into said liquid
impervious body adjacent said second body end and further having external threads;
said sectional container having:
a divider wall;
an internally threaded cavity adjacent to and extending from said divider wall in a
first direction and encompassing and engaging with said external threads and
having a height corresponding to a distance extending between said first open
end of said bottle neck and said second body end of said bottle neck; and
an externally threaded neck adjacent to and extending from said divider wall in a
direction generally opposed to said first direction enclosed at a first end by
said divider wall and open at a second end and further having external
threads, said externally threaded neck extending a distance between said first
end and said second end corresponding approximately equal to said distance
between said first open end of said bottle neck and said second body end of
said bottle neck;
said cap having an internally threaded cavity encompassing and engaging with said external

threads of said sectional container neck and ~~having a height corresponding to a~~
~~distance~~ extending between said first open end of said bottle neck and said second
body end of said bottle neck.

14. The combination bottle, cap, and sectional container of claim 13 wherein said sectional container further comprises:

a second divider wall;

a second internally threaded cavity adjacent to and extending from said second divider wall

5 in a first direction and encompassing and engaging with said external threads of said sectional container externally threaded neck and ~~having a height corresponding to a~~
~~distance~~ extending between said first open end of said bottle neck and said second body end of said bottle neck; and

a second externally threaded neck adjacent to and extending from said second divider wall

10 in a direction generally opposed to said first direction enclosed at a first end by said second divider wall and open at a second end and further having external threads,
said externally threaded neck extending a distance between said first end and said second end of said second externally threaded neck ~~corresponding approximately~~
equal to said distance between said first open end of said bottle neck and said second
15 body end of said bottle neck.

15. (New) In combination:

10/813,737
Page 7

a beverage container having a coupling and an opening from an exterior of said
beverage container to an interior of said beverage container, said opening
permitting fluid to pass between said beverage container interior and exterior;

5 a cover having a coupling co-operative with said beverage container coupling, said
cover preventing fluid from passing between said beverage container interior
and exterior when said cover coupling is coupled to said beverage container
coupling in a closing coupled relation and further removable entirely from
said beverage container coupling to open said beverage container opening;
10 and

a special receptacle cap removably holding a first composition adjacent said beverage
container and separating said beverage container coupling from said cover
coupling, said special receptacle cap comprising:

a divider wall;

15 a first coupling affixed to said divider wall and co-operative with said
beverage container coupling, said divider wall cooperative with said
beverage container to prevent fluid from passing between said
beverage container interior and exterior when said special receptacle
cap first coupling is coupled to said beverage container coupling in
20 a closing coupled relation, said first coupling further removable
entirely from said beverage container coupling to separate said
divider wall from said beverage container and thereby open said

beverage container opening;

25

a second coupling affixed to said divider wall engaging with said cover coupling in a closing coupled relation to form an enclosed chamber isolated from said beverage container and at least partially releasing to open said enclosed chamber.

16. (New) The combination beverage container, cover and special receptacle cap of claim 15 wherein said special receptacle cap further comprises a first receptacle cap and a second receptacle cap, said first and second receptacle caps engaged to form a second cavity isolated from said first cavity and said beverage container.
17. (Original) The combination beverage container, cover and special receptacle cap of claim 15 wherein said first composition is a solid edible composition.
18. (Original) The combination beverage container, cover and special receptacle cap of claim 17 wherein said first composition further comprises aspirin.
